Joseph Daniele

Brian Law’s Wooden Clocks - How to Design and Build a Woodenclock. What will I need to build a wooden clock - Scroll saw and Lathe. I have shown the coping saw amongst the hand tools and I guess you could attempt to cut all the clock parts with one of those but it is not really practicable. The most common way of cutting the parts would be either to use a Scroll Saw or a CNC router. I have been using 3D Printing to produce parts for the clock prototypes I build, it started with Clock 35 which I had designed for my Grandson. I wanted it to be a fun colourful clock suitable for a young child or nursery, and the ability to print in a variety of colours was a real bonus as it meant that there was need to paint the gear teeth and possibly compromise the running of the clock. A sampling of the exciting projects in How to Build 35 Great Clocks: Carved Eagle Clock; Carriage Style Clock, a reproduction from Colonial Williamsburg; Colonial Style Bracket Clock, pine with brass dial; Steeple Clock, from the author's collection; Pillar and Scroll Clock; Antique Clocks, reproductions from Old Sturbridge Village; Oak Long Drop Clock; Vienna Type Regulator Clock; Cherry School House Regulator Clock; Court House Regulator Hexagon; Granddaughter Wall Clock, made from pine; Cherry Grandmother Clock, from the author's collection; Grandfather Tall Case Clock; Wall Barom How to build 35 great clocks. Master cabinetmaker Joseph Cariele gives you complete plans lor 35 individual clocks Plaques clocks to tall case clocks each with step by step instructions and photo-giapts pt each finished piece Hardcover erthon, 192 pages, listing of parts suppliers Send S29 95 plus S3 shipping We also honor Visa.
